

“The highest performing personal environments for any specification”

DesignOptions offers a freestanding modular system of furniture, giving customers total solutions for working and learning environments. Our Elements Desking System accomplishes the role of a panel based system with: greater value, simplicity, less cost, and a more functional working environment. Our product surpasses panel-based systems by eliminating the complexity and expense of panels as well as the amount of space that is deducted from the worksurface. This system offers a wide variety of shapes, rectilinear and curvilinear, to best fit your needs. Be assured that the product you specify today, will work in the environment tomorrow. This line adjusts and expands to fit your needs and allows you to easily reconfigure in the field and add pieces on in the future. No matter what size or shape, nothing fits your space like the DesignOptions Elements line of furniture.
